## IN THE SPECIFICATION:

Please AMEND paragraph 0028 as shown below:

--[0028] As is known in the art, auto-negotiation is an aspect of fast ethernet, wherein the network is capable of negotiating a highest communication speed between a source and a destination based on the capabilities of the respective devices. The communication speed can vary, as noted previously, between 10 Mbps, 100 Mbps and 1000 Mbps; auto negotiation capability, therefore, is built directly into each GPIC module. The address resolution logic (ARL) and layer three tables (ARL/L3) 21a, 21b, 21c31a, 31b, 31c, and 31d, rules table 22a, 22b, 22e32a, 32b, 32c, and 32d, and VLAN tables 23a, 23b, and 23e 33a, 33b, 33c, and 33d are configured to be part of or interface with the associated GPIC in an efficient and expedient manner, also to support wirespeed packet flow. --
